

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1-18. (Cancelled)

19. (New) A method of evaluating utility usage of an organization comprising:

storing in computer memory data representing one or more facilities operated by the organization;

storing in computer memory data representing one or more utility sources, each facility using one or more of the utility sources;

calculating the utility consumption from each utility source for at least one facility;

comparing the utility consumption of one or more of the facilities with the utility consumption of respective benchmark standards generated from similar facilities; and

generating a report detailing utility usage of one or more of the facilities, or part thereof, of the organization.

20. (New) A method of evaluating utility usage of an organization as claimed in claim 19 further comprising:

storing in computer memory data representing one or more sites operated by the organization that are associated with one or more facilities;

calculating the utility consumption from each utility source for at least one site; and

generating a report detailing the utility usage of one or more of the sites.

21. (New) A method of evaluating utility usage of an organization as claimed in claim 19 further comprising generating a report detailing the difference between utility consumption of one or more of the facilities and their respective benchmark standards.

22. (New) A method of evaluating utility usage of an organization as claimed in claim 19 further comprising:

storing in computer memory data representing one or more mobile assets associated with the organization;

calculating the utility consumption from each utility source for at least one mobile asset; and

generating a report detailing the utility usage of one or more of the mobile assets of the organization.

23. (New) A method of evaluating utility usage of an organization as claimed in claim 22 further comprising:

storing in computer memory data representing one or more sites operated by the organization that are associated with one or more mobile assets;

calculating the utility consumption from each utility source for at least one site; and

generating a report detailing the utility usage of one or more of the sites.

24. (New) A method of evaluating utility usage of an organization as claimed in claim 22 further comprising:

comparing the utility consumption of one or more of the mobile assets with the utility consumption of respective benchmark standards generated from similar mobile assets; and

generating a report detailing the difference between the utility consumption of one or more of the mobile assets and their respective benchmark standards.

25. (New) A method of evaluating utility usage of an organization comprising:

storing in computer memory data representing one or more processes operated by the organization;

storing in computer memory data representing one or more utility sources, each process using one or more of the utility sources;

calculating the utility consumption from each utility source for at least one process;

comparing the utility consumption of one or more of the processes with the utility consumption of respective benchmark standards generated from similar processes; and

generating a report detailing utility usage of one or more of the processes, or part thereof, of the organization.

26. (New) A method of evaluating utility usage of an organization as claimed in claim 25 further comprising:

storing in computer memory data representing one or more sites operated by the organization that are associated with one or more processes;

calculating the utility consumption from each utility source for at least one site; and

generating a report detailing the utility usage of one or more of the sites.

27. (New) A method of evaluating utility usage of an organization as claimed in claim 25 further comprising generating a report detailing the difference between utility consumption of one or more of the processes and their respective benchmark standards.

28. (New) A method of evaluating utility usage of an organization as claimed in claim 25 further comprising:

storing in computer memory data representing one or more mobile assets associated with the organization;

calculating the utility consumption from each utility source for at least one mobile asset; and

generating a report detailing the utility usage of one or more of the mobile assets of the organization.

29. (New) A method of evaluating utility usage of an organization as claimed in claim 28 further comprising:

storing in computer memory data representing one or more sites operated by the organization that are associated with one or more mobile assets;

calculating the utility consumption from each utility source for at least one site; and

generating a report detailing the utility usage of one or more of the sites.

30. (New) A method of evaluating utility usage of an organization as claimed in claim 28 further comprising:

comparing the utility consumption of one or more of the mobile assets with the utility consumption of respective benchmark standards generated from similar mobile assets; and

generating a report detailing the difference between the utility consumption of one or more of the mobile assets and their respective benchmark standards.

31. (New) A utility usage evaluation system comprising:

a client data store in which is stored data representing one or more facilities operated by an organization, and data representing one or more utility sources, each facility using one or more of the utility sources;

a benchmark database including data representing the utility consumption of respective benchmark standards with which the utility consumption of one or more of the facilities can be compared;

a utility consumption calculator configured to calculate the utility consumption from each utility source for at least one facility;

a utility consumption comparer configured to compare the utility consumption of one or more of the facilities with the utility consumption of respective benchmark standards generated from similar facilities; and

a report generator configured to generate a report detailing the utility usage of one or more of the facilities of the organization.

32. (New) A utility usage valuation system as claimed in claim 31 wherein:

the client data store has stored in it data representing one or more sites operated by the organization that are associated with one or more facilities;

the utility consumption calculator is further configured to calculate the utility consumption from each utility source for at least one site; and

the report generator is configured to generate a report detailing the utility usage of one or more of the sites.

33. (New) A utility usage evaluation system as claimed in claim 31 wherein the report generator is further configured to generate a report detailing the difference between utility consumption of one or more of the facilities and their respective benchmark standards.

34. (New) A utility usage evaluation system as claimed in claim 31 wherein:

the client data store is further configured to store data representing one or more mobile assets associated with the organization;

the utility consumption calculator is further configured to calculate the utility consumption from each utility source for at least one mobile asset; and

the report generator is further configured to generate a report detailing the utility usage of one or more of the mobile assets of the organization.

35. (New) A utility usage evaluation system as claimed in claim 34 wherein:

the client data store is further configured to store data representing one or more sites operated by the organization that are associated with one or more mobile assets;

the utility consumption calculator is configured to calculate the utility consumption from each utility source for at least one site; and

the report generator is configured to generate a report detailing the utility usage of one or more of the sites.

36. (New) A utility usage evaluation system as claimed in claim 34 wherein:

the benchmark database includes data representing the utility consumption of respective benchmark standards generated from similar mobile assets;

the utility consumption comparer is configured to compare the utility consumption of one or more of the mobile assets with the respective benchmark standards stored in the benchmark database; and

the report generator is configured to generate a report detailing the difference between a utility consumption of one or more of the mobile assets and their respective benchmark standards.

37. (New) A utility usage evaluation system comprising:

a client data store in which is stored data representing one or more processes operated by an organization, and data representing one or more utility sources, each process using one or more of the utility sources;

a benchmark database including data representing the utility consumption of respective benchmark standards with which the utility consumption of one or more of the processes can be compared;

a utility consumption calculator configured to calculate the utility consumption from each utility source for at least one process;

a utility consumption comparer configured to compare the utility consumption of one or more of the processes with the utility consumption of respective benchmark standards generated from similar processes; and

a report generator configured to generate a report detailing the utility usage of one or more of the processes of the organization.

38. (New) A utility usage valuation system as claimed in claim 37 wherein:

the client data store has stored in it data representing one or more sites operated by the organization that are associated with one or more processes;

the utility consumption calculator is further configured to calculate the utility consumption from each utility source for at least one site; and

the report generator is configured to generate a report detailing the utility usage of one or more of the sites.

39. (New) A utility usage evaluation system as claimed in claim 37 wherein the report generator is further configured to generate a report detailing the difference between utility consumption of one or more of the processes and their respective benchmark standards.

40. (New) A utility usage evaluation system as claimed in claim 37 wherein:

the client data store is further configured to store data representing one or more mobile assets associated with the organization;

the utility consumption calculator is further configured to calculate the utility consumption from each utility source for at least one mobile asset; and

the report generator is further configured to generate a report detailing the utility usage of one or more of the mobile assets of the organization.

41. (New) A utility usage evaluation system as claimed in claim 40 wherein:

the client data store is further configured to store data representing one or more sites operated by the organization that are associated with one or more mobile assets;

the utility consumption calculator is configured to calculate the utility consumption from each utility source for at least one site; and

the report generator is configured to generate a report detailing the utility usage of one or more of the sites.

42. (New) A utility usage evaluation system as claimed in claim 40 wherein:

the benchmark database includes data representing the utility consumption of respective benchmark standards generated from similar mobile assets;

the utility consumption comparer is configured to compare the utility consumption of one or more of the mobile assets with the respective benchmark standards stored in the benchmark database; and

the report generator is configured to generate a report detailing the difference between a utility consumption of one or more of the mobile assets and their respective benchmark standards.

43. (New) A computer-readable medium having computer-executable instructions for performing a method of evaluating utility usage of an organization, the method comprising:

storing in computer memory data representing one or more facilities operated by the organization;

storing in computer memory data representing one or more utility sources, each facility using one or more of the utility sources;

calculating the utility consumption from each utility source for at least one facility;

comparing the utility consumption of one or more of the facilities with the utility consumption of respective benchmark standards generated from similar facilities; and

generating a report detailing utility usage of one or more of the facilities, or part thereof, of the organization.

44. (New) A computer-readable medium having computer-executable instructions for performing a method of evaluation utility usage of an organization, the method comprising:

storing in computer memory data representing one or more processes operated by the organization;

storing in computer memory data representing one or more utility sources, each process using one or more of the utility sources;

calculating the utility consumption from each utility source for at least one process;

comparing the utility consumption of one or more of the processes with the utility consumption of respective benchmark standards generated from similar processes; and

generating a report detailing utility usage of one or more of the processes, or part thereof, of the organization.

45. (New) A utility usage evaluation system comprising:

means for storing in computer memory data representing one or more facilities operated by an organization;

means for storing in computer memory data representing one or more utility sources, each facility using one or more of the utility sources;

means for calculating the utility consumption from each utility source for at least one facility;

means for comparing the utility consumption of one or more of the facilities with the utility consumption of respective benchmark standards generated from similar facilities; and

means for generating a report detailing utility usage of one or more of the facilities, or part thereof, of the organization.

46. (New) A utility usage evaluation system comprising:

means for storing in computer memory data representing one or more processes operated by an organization;

means for storing in computer memory data representing one or more utility sources, each process using one or more of the utility sources;

means for calculating the utility consumption from each utility source for at least one process;

means for comparing the utility consumption of one or more of the processes with the utility consumption of respective benchmark standards generated from similar processes;

means for generating a report detailing utility usage of one or more of the processes, or part thereof, of the organization; and

means for evaluating utility usage of an organization.
